### ANNUAL REPORT

OF THE

# BOARD OF DIREGTORS

# CITY TRUSTS.

REPORT FOR THE YEAR 1884.

PHILADELPHIA: JANUARY, 1885. PHILADELPHIA;
BURK & McFETRIDGE, PRINTERS,

Nos. 306 and 308 Chestnut St.,

1885.

#### BOARD OF DIRECTORS

OF

# CITY TRUSTS

1885.

W. HEYWARD DRAYTON, President.

Ex-Officio Member of all Standing Committees.

LOUIS WAGNER, Vice-President.

JOSEPH L. CAVEN,
712 Walnut Street.

IAMES CAMPBELL.

BENJAMIN B. COMEGYS, 421 Chestnut Street, (Philad'a Bank.) WILLIAM L. ELKINS, 125 Arch Street,

WILLIAM B. MANN, S. E. cor, Sixth and Chestnut Sts.

JOHN H. MICHENER,

193 Arch Street. WILLIAM HENRY RAWLE,

710 Walnut Street,

JAMES SIMPSON, M. D.
S. E. cor. Eighth and Pine Sts.

GEORGE H. STUART, 108 S. Fourth St. (Merchants' Bank.) RICHARD VAUX, 120 Walnut Street.

Members of the Board, "Ex-Officio."
WILLIAM B. SMITH, Mayer, Office, Fifth and Chestnut Streets.
JAMES R. GATES, Pres' Select Council, Manheim and Green Sts., Gt'n.
CHARLES LAWRENCE, Pres' Common Council, 16 N. Deisware Avenue.

F. CARROLL BREWSTER, Solicitor, 214 W. Washington Square.

§ FRANK M. HIGHLEY, Secretary, 19 South Twelfth Street.

JOHN S. BOYD, Supt. Admission and Indenture, 19 South Twelfth Street.

## COMMITTEES, 1885.

Committee on Finance

JOSEPH L. CAVEN. IAMES CAMPBELL WILLIAM L. ELKINS.

BENJAMIN B. COMEGYS. WILLIAM HENRY RAWLE. THE MAYOR OF THE CITY Committee on Girard Real Estate within the City.

JOHN H. MICHENER, BENJAMIN B. COMEGYS, IOSEPH L. CAVEN,

WILLIAM L. ÉLKINS. RICHARD VAUX. PRES'T SELECT COUNCIL.

LOUIS WAGNER. IAMES CAMPBELL WILLIAM B. MANN.

Committee on Girard Real Estate without the City. JAMES SIMPSON, M. D., WILLIAM HENRY RAWLE, PRES'T COMMON COUNCIL.

Committee on Household of Girard College, GEORGE H. STUART. JOHN H. MICHENER.

LOUIS WAGNER, JOSEPH L. CAVEN, RICHARD VAUX.

WILLIAM B. MANN. Committee on Instruction and Library of Girard College. TAMES CAMPBELL. WILLIAM B. MANN BENJAMIN B. COMEGYS.

JAMES SIMPSON, M. D., WILLIAM HENRY RAWLE. THE MAYOR OF THE CITY. Committee on Admission, Discipline and Discharge.

RICHARD VAUX, BENIAMIN B. COMEGYS, GEORGE H. STUART, WILLIAM L. ELKINS.

JAMES SIMPSON, M. D., PRES'T COMMON COUNCIL. Committee on Technical Instruction.

RICHARD VAUX JOHN H. MICHENER. LOUIS WAGNER.

IAMES CAMPBELL. WILLIAM HENRY RAWLE. PRES'T SELECT COUNCIL. Committee on Infirmary

IAMES SIMPSON, M. D., WILLIAM B. MANN, JOHN H. MICHENER,

LOUIS WAGNER, BENJAMIN B. COMEGYS PRES'T COMMON COUNCIL. Committee on Wills' Hospital and Minor Trusts.

WILLIAM B. MANN. GEORGE H. STUART. BENJAMIN B. COMEGYS.

JOSEPH L. CAVEN, JAMES SIMPSON, M. D. PRES'T SELECT COUNCIL. Committee on Shields' Almshouse Fund.

WILLIAM L. ELKINS. GEORGE H. STUART, LOUIS WAGNER,

RICHARD VAUX. IOHN H. MICHENER. THE MAYOR OF THE CITY.

Committee on Appropriations. WILLIAM HENRY RAWLE, JOSEPH L. CAVEN. GEORGE H. STUART.

IAMES CAMPBELL. WILLIAM L. ELKINS, THE MAYOR OF THE CITY.

Executive. CHAIRMEN OF ALL STANDING COMMITTEES.

### FIFTEENTH ANNUAL REPORT

OF THE

### DIRECTORS OF CITY TRUSTS ...

To the Legislature of the State of Pennsylvania, the Councils of the City of Philadelphia, and the Board of Appointment, comprising the Judges of the Courts of Common Pleas for the City and County of Philadelphia:-

THE BOARD OF DIRECTORS OF CITY TRUSTS, respectfully present their report for the year ending December 31, 1884, and in doing so are gratified to add that the Trusts committed to their care, continue to prosper. The objects which seemed nearest to Mr. Girard's heart when his will was made, were to educate poor orphan boys, to cultivate their minds and develop their moral principles above the many temptations to which, through poverty and ignorance, they are exposed; and to contribute to the welfare of the city of Philadelphia, to which end he wished to have improved the neighborhood of the river Delaware, so that the health of the citizens might be promoted and preserved, and that the eastern part of the city might be made to correspond better with the interior.

In other parts of his will he expressed the desire that all wooden buildings should be pulled down and removed, and the city property and the general appearance of the city itself, improved.

The bequests of Mr. Girard to the city for various uses and purposes, are far greater in value than all the other trusts committed to our care combined, and great as their value was at the hour of his death, its increase has been remarkable.

The residuary estate comprises land and buildings in Philadelphia, Schuylkill and Columbia Counties assessed at \$5,486,705.00, with loans and stocks, the par value of which is \$1,859,365,22, making a total of \$7,346,070.22. This total on December 31, 1874, ten years ago was \$6,104,862.22, while the gross income has increased from \$678,479.67 to \$949,380.47 for the year 1884. These figures do not include the estimated value of the College grounds and buildings. If this were added, the total at this time would be \$10,338,020.88.

The total of the rent roll in the then city and county of Philadelphia for the quarter ending December 31, 1833, was \$13,852.17; for the quarter ending December 31, 1884, it was \$84.302.05.

In December, 1833, the total par value of the stocks and loans held by the Residuary Fund was \$288,104.13, and the income derived therefrom was \$12,345.78. In December, 1884, their total par value was \$1,859,365.22, and the income \$81,610.10.

This increasing income has not only enabled the Board to add much to the improvement of the city by the erection of many new and fine buildings, but has been used also to improve those already erected, and much of it has been expended in adding accommodations for an increased number of pupils in the College.

For general details of income and expenditure, see Report of Superintendent in Appendix A.

There has been no year since the beginning of the Trust during which the Board has been deprived of the services of so many members. On the 25th of August, James L. Claghorn died, and his death was followed on the 28th of the same month by that of Henry M. Phillips; these gentlemen had been valuable members of the Board from its creation. Earlier in the year General Charles H. T. Collis, also an original member, having changed his residence to another city, resigned, and the terms of Messrs. Samuel G. King and William H. Lex, respectively Mayor of the city and President of Common Council having expired, the Trust was also deprived of their counsel and services. Appropriate resolutions were adopted in relation to the loss of these gentlemen, entered on the minutes, and sent to the retiring members and to the families of those who had died.

In August last, Col. Chas. S. Smith, who for over thirty-seven years prior to January 1, 1881, had held the offices, first of Treasurer and later of Superintendent of the Girard Estate, died at the advanced age of eighty-six years. During that long period his ability and sterling integrity, were of the utmost value to the Estate and deserve the most hearty and grateful recognition.

Our orphan boys were also, during the year, deprived by death of the faithful and valuable services of Dr. James Markoe, Jr., who had for many years been one of our physicians. Resolutions of regret and condolence were adopted and conveyed to his family.

The vacancies created by the loss to the Board of Messrs. Claghorn, Phillips, Collis, King and Lex, have been supplied by the appointment by the Court of Messrs. William L. Elkins, James Simpson, M. D., and Richard Vaux. Mr. William B. Smith has succeeded Mr. King as Mayor of the city, and Messrs. James R. Gates and Charles Lawrence took their seats as Presidents respectively of the Select and Common Councils.

Immediately preceding the close of the year, Mr. Alexander Biddle, who had for three years presided over the deliberations of the Board, and supervised all the details of the Trusts, resigned both the presidency of the Board and his seat in the body.

It is not inappropriate to record here, that this action on Mr. Biddle's part has been deeply regretted by his brethren, to all of whom his long association as a colleague, and his urbane and conciliating conduct as a presiding officer, had attached and endeared him.

While this report is being prepared, the Judges have selected Mr. Wm. Henry Rawle, as a director, to supply Mr. Biddle's place.

When the present Board was organized, there were about five hundred boys in the College; there are now, as our report shows, eleven hundred and thirty-two. The trusts were managed by eight committees; there are now twelve. In 1869 one officer could readily perform the combined duties of Secretary and Superintendent of Binding-out. Owing to the continuous calls on the time of the Secretary, the very important duties of Superintendent of Binding-out, have not been sufficiently attended to of late; and in view of the growing importance of this latter office the duties have been divided between two officers, a Secretary, and a Superintendent of Admission and Indenture. To the first office Mr. Frank M. Highley has been elected, and to the other Dr. John S. Boyd.

#### REAL ESTATE IN THE CITY.

Early in the year an application was made by the Board of Brokers for additional accommodations. These were afforded by renting them rooms on the second story of the building in charge of the Trust, immediately south of the Stock Exchange, and connecting the two buildings by a bridge thrown across the avenue, known as Stock Exchange Place. A contract entered into in February, with the Brush Electric Light Company, for lighting Delaware avenue, by means of underground wires; appeared for some months to be a great success, lighting up the avenue and the river in front brilliantly and in the most satisfactory manner. After a trial for more than half a year, from some defect, which the company expressed their inability to rectify, the system failed.

The lease of the People's Bank, with Messrs. Kemble and Kern, which has expired, has been renewed for one year, from October 1, 1884, at a rent of \$20,000 per annum.

In view of the small income derived from the large tract of five hundred and twenty-seven acres in the southern part of the city, its improvement has been a matter of grave consideration for several years; and although the Board has not yet felt at liberty to incur the expense of erecting residences on any part of this ground, they are confident the day is very near when this may be done to advantage, thus adding considerably to the income of the Estate. This land is assessed at \$378,300, and yielded this year a net revenue of \$4,904.65, or only about one and one-third per cent.

A contract has been made with Messrs. Hood, Bonbright & Co., one of our largest commission houses, to lease to them a part of the real estate of the Trust at the corner of Eleventh and Market streets, running through to Girard street. This lease calls for extensive improvements, which will add much to the beauty of this part of the city and considerably increase the income of the Estate.

Much flagging, curbing and paving was done on both North and South College avenues. The roadway on North College avenue, between Twenty-third and Twenty-fourth streets, was paved with granite blocks, an arrangement having been made with the other owners by which the Estate bears only one-fourth of the cost.

IMPROVEMENT OF THE EASTERN PART OF THE CITY AND REMOVAL OF WOODEN BUILDINGS.

Mr. Girard appropriated a special fund of \$500,000, to lay out, regulate, light, and pave Delaware avenue and Water street, and to improve the same in a manner for which he left specific instructions, and also to aid in the removal of wooden buildings in the city. The most important part of this work, the widening of Delaware avenue and Water street, has been for some years completed, but other matters connected therewith have continued to require attention.

During the past year, in addition to the attempt to introduce permanently the electric light, which proved such a melancholy failure, Delaware avenue and Water street have been kept in repair; the bulkheads on Delaware avenue repaired and renewed; and the streets from Vine to South have been kept clean, ashes and other dirt being carefully removed, adding greatly to the comfort of our tenants and others occupying premises in this vicinity.

During the year, eight wooden buildings were removed at a cost of eight hundred dollars. This provision of Mr. Girard's will can only be carried out slowly, as there is no compulsion on owners of such buildings to remove them.

Owing to the length of time which elapsed between the bequest of \$500,000 and the improvements made and paid for out of it, the fund has so accumulated that with all the expensive outlay made, it now amounts to \$770,569.17.

#### REAL ESTATE OUT OF THE CITY.

Although the income from the rents of real estate in the city during the year 1884 was greater than it has been in any other year, the income from coal rents, owing to frequent stoppage of collieries, has been less than in several previous years. The gross revenue from this last source has, how-

ever, reached the large sum of \$450.949.21, out of which there has been re-invested \$162.078.62, under a rule of the Board, requiring a re-investment each year of a certain portion of the income from the mines, to provide against the ultimate extinction of the coal.

Unless business troubles should occur, not now anticipated, the income from coal is likely to be greater in 1885 than it has ever been from the Girard mines.

The most important question in relation to the management of the Estate in Schuylkill and Columbia Counties for several years, has been that of a proper water supply.

Previous to the year 1881, a small dam and reservoir, holding four hundred thousand gallons of water, had been constructed supplying William Penn Colliery and the people of that vicinity. The demands of the collieries and neighborhood for an increased supply, became so pressing that an additional reservoir to secure and store the water of Lost Creek, capable of holding 35,000,000 gallons, was completed in 1881. The severe drouths of that year and of 1882, having demonstrated that even this storage might not, at all times, be sufficient, and in order to provide against the calamity of any future failure, and also to anticipate the increasing needs of this region, under a charter referred to in last year's report, another dam and reservoir to store 85,000,000 additional gallons of water, commenced early in the year, are nearly finished. We were enabled to make these improvements only after obtaining a decree of the Court of Common Pleas, authorizing and directing the Board of City Trusts to invest in the stock of the Water Company. This last reservoir and dam have been so constructed that should there be a necessity for even a greater supply hereafter, the capacity can be nearly doubled at a comparatively small additional expense.

While the primary object of these water improvements was rather protection from the danger of a possible water famine, than revenue, so far, this investment has not proved unprofitable, and we confidently look forward to a reasonable income from our outlay.

Complete details of the workings of the Water Company are annexed in Appendix B.

During the month of October, most of the Committee on Real Estate out of the City, accompanied by other members of the Board, by some of the Judges, and by several scientific gentlemen, visited the coal lands and other property of the Trust in Schuylkill and Columbia Counties. Our lessees seemed to be working the mines to great advantage, and the contractor, who had met with unexpected and embarrassing difficulties in completing the dam of the new reservoir, was, in spite of them, proceeding with his extensive contract, rapidly and thoroughly.

In addition to the ten coal mining leases entered into last year for a period of fifteen years, under authority of Court of Common Pleas No. 3, of this county; two additional leases have been made, dated from January 1, 1885.

- 1. To the Lehigh Valley Coal Company, Shenandoah (Packer No. 2), and Packer (Packer No. 4) Collieries.
- 2. To Lehigh Valley Coal Company, Lehigh (Packer No. 3) Colliery. Both were made under the decree aforesaid of June 4, 1883.

Since the 1st of January, 1884, the surface rights to forty-eight lots at Girardville have been sold, realizing the sum of \$18,790. And there are now leased about three hundred and fifty small lots in Columbia and Schuylkill Counties, at an average rental of \$15 per annum. The taxes paid during 1884 in these counties was \$50,071.04.

Annexed in Appendix B, is the annual report of the Engineer of the Estate in Schuylkill and Columbia Counties, giving with great particularity, the details of the management and working of our coal property there during the last year.

Among other matters referred to, is that of *Forest Tree Culture*. Mr. Thompson makes valuable suggestions on this subject, which have received and will continue to receive our careful attention. His whole report is well worthy of your inspection.

#### GIRARD COLLEGE.

The condition of the College has been satisfactory during the year. The conduct of the boys has been, as a rule, orderly, and they have made fair progress both in their literary and mechanical schools.

One hundred and forty-three pupils were admitted during the year; four died; thirty-four were indentured to various occupations; the indentures of sixty-six were cancelled for satisfactory reasons; and twelve were discharged for malconduct, having become, in the language of Mr. Girard's will, "unfit companions for the rest."

The number at present in the institution is eleven hundred and thirty-two. Of those admitted in 1884, all were born in the old city of Philadelphia or in other parts of Pennsylvania. None were admitted during the year from any other State. As under the provisions of the will a preference is given first to boys born in Philadelphia, and second to those born in other parts of the State of Pennsylvania, few boys have ever obtained entrance from any other State, as more apply annually from Pennsylvania than can be admitted. A few were admitted in 1877 from New York, which is next on the list of admission, but these are no longer in the College.

The applications for admission continue in excess of the capacity to receive. Four hundred and forty-three applications are now on file awaiting vacancies.

The health of the residents at the College, teachers, officers and pupils, has been remarkably good. The number of deaths during the year in a population of eleven hundred and thirty-two boys and one hundred and twenty-one persons employed and residing in the College, being only five.

During the year a change has been made in the arrangement for medical services. Instead of a resident and an attending or consulting physician, at fixed salaries, the service of the resident physician has been continued, and instead of an attending physician at a fixed salary, six gentlemen of the highest professional standing have been elected as physicians and surgeons, one or more of them to be called in, in critical cases, and compensated for services actually rendered. The gentlemen elected are Drs. D. Hayes Agnew, John H. Brinton and Thomas M. Drysdale as surgeons, and Drs. J. M. DaCosta, John M. Adler and Thomas B. Reed as physicians. Dr. DaCosta subsequently declined to serve.

The most important subject occupying the attention of the Directors during the year, has been that of technical instruction. Very soon after the organization of the College the great importance of more instruction for the boys in the use of tools became apparent. In 1848 a committee of the then Board of Directors, of which Mr. Wm. J. Duane, who prepared Mr. Girard's will, and the accomplished Henry D. Gilpin, were members, recommended, in the strongest language, some mechanical instruction, but from some cause, no satisfactory teaching was then introduced.

Soon after the creation of the present Board, the Executive Committee, in April, 1873, through Mr. Wm. Welsh, its Chairman, recommended that the trades of manufacturing paper boxes and tinware, should be taught, but this was not adopted.

In 1876 the Centennial Exhibition gathered into its brilliant focus many of the results reached by the lest thinkers and most practical men of the civilized world; among them, a simple method of teaching the rudiments of practical mechanics to boys, which seems to have been thought out by Russian instructors, and has become popularly known as the "Russian plan." One of the first to appreciate and utilize this system was the President of the Institute of Technology in Boston, Mr. John D. Runkle. He introduced it into that institution, and on the invitation of Mr. Welsh, the President of our Board, in the Fall of 1877, in a lecture at the Franklin Institute, demonstrated its simplicity and practicability to an audience, among whom were some of our members

It was not, however, until the year 1881, after great deliberation and an elaborate report from a special committee, that the Board carefully considering three plans suggested to them—First, establishing machine shops in connection with the school; Second, a large establishment with various tools and appliances suitable to many trades, with competent instructors in each branch; Third, elementary instructions only; not to teach a trade nor secure a product, but to train the pupil in the use of tools—instruction, not construction,—in fact the Russian system;—adopted the last, as not only the most economical, but best adapted to introduction into the College; the first two plans, being not only expensive, but in the opinion of some members of the Board, not in accordance with the scheme of instruction prescribed by Mr. Girard for the education of his beneficiaries.

Early in the Spring of 1882, mechanical instructions was begun. Even then, however, only tentatively, and in the single branch of metal working. This trial was so satisfactory, that in 1883 an appropriation was made for erecting a commodious and properly constructed building for a greater variety of technical teaching. This school building, placed in the north-west part of the College grounds, is 55 feet wide by 155 feet in length, two stories high, and compares in its

details of construction with the best models of workshops of this character.

The building was finished in December, 1884, and formally opened, with appropriate ceremonies, on the 9th of that month. Before the building was completed, elementary instruction in wood work was introduced, which promises to be as successful as metal working has proved.

The Board have expressed their approval of teaching mechanical drawing in connection with the instruction in the use of tools, as soon as the committee having the general supervision of this department shall be prepared to submit a proper plan; this not to lessen nor encroach on time now devoted to the equally important branch of free hand drawing, which has for many years been admirably taught in the College by Professor Becker.

While the Technical School was being built, some of the members of the Committee on Technical Instruction, Messrs. Mann, Gates, Wagner, Caven and Drayton, accompanied by the Mayor of the City. The President of Common Councils, and Mr. James H. Windrim, the Architect of the Trust, visited and inspected the system of teaching and the construction of the workshops and machinery of the Stevens Institute at Hoboken, the Adler Institute in New York, and the Institute of Technology in Boston. The Committee were politely assisted in their investigation by the officers of each of these institutions, but finding the machinery, the arrangement of the workshops and work-benches of the Institute of Technology in Boston most nearly what they were seeking, drawings and measurements of many of these were made by Mr. Windrim, aided in every way by Professor Runkle, who gave up his whole time to the committee while in Boston.

About two hundred and fifty boys are now under instruction in the use of tools with metal and wood. Mr. T. Mason Mitchell, the Superintendent of Technical Work, makes satisfactory reports as to the diligence, order and progress of the pupils. The school rooms are furnished with the necessary implements and equipments for teaching the use of tools. Though wood work has only been taught a few months, a decided preference of one branch over the other is already shown by some of the boys. As soon as the boys are able to understand their uses, instruments for testing the exactness of their work are placed in their hands and they are taught how to use them. To do this carefully and precisely calls for the most persistent and patient efforts from the Instructor.

It is only a just tribute to the Spring Garden Institute of Philadelphia, to say that the intelligent manufacturers and practical mechanics who manage it, and from whom we have had much help, adopted this Russian system, or one quite similar, several years before it was introduced into the College, incorporating it, however, with more advanced teaching than our Board has felt to this time warranted to undertake.

Phonography introduced into the College in 1880, continues to be successfully taught. Some of our boys who have been instructed at the College have secured profitable employment, one at a salary of \$30 a month within six months after leaving College. Type writing is also taught to such boys as display an aptitude for it. Its introduction is so recent that nothing can be said of it, experimentally, but the increasing demand for experts in this art seems to promise another opening for the employment of our orphans who leave the College to struggle for a living.

A well selected library of upwards of nine thousand volumes has been collected at the College, and is opened on Mondays and Thursdays, in the afternoon, after school hours, and on Saturdays in the forenoon, for the use of the officerof the College and the higher classes of pupils. The pupils of the Fourth School use the library in connection with the instruction in the English department.

The Senior class spends much time in the library every Saturday morning under the direction and supervision of the Librarian, who is also the instructor in the higher English studies, to consult books and make notes for school exercises in the different departments of instruction.

The average annual increase of books is above three hundred, at a cost of \$500 a year.

A natural apprehension exists among sanitarians that the cholera, which has proved such a scourge in parts of Europe recently, will extend to this country in 1885. As a proper-precaution, Drs. Brinton and Adler are now making an inspection of our buildings and grounds at the College, more especially in relation to the ventilation, drainage and heating. The clothing and diet of pupils and employees will also be inspected, and every precaution, which science can suggest, adopted.

Our attention having been called to some apparent deterioration in the main building, Mr. Walter, the original Architect, was employed to assist Mr. Windrim in a careful examination of this important structure. Suggestions in his report are now receiving careful consideration by the proper committee.

It being found that the heating apparatus heretofore in use was not sufficient for the thorough warning of all the buildings in the College grounds, and also for the supply of power to the technical workshops, an additional boiler house with eight new boilers of sixty-horse power, in two nests, and the necessary appendages, together with a Corliss engine of eighty-horse power for working the machinery of the school, were constructed and finished during the year. The engine was purposely constructed with more power than will be required for the machinery, as it is to be used

also for running dynamo machines to light the grounds with the electric light, in the near future.

Other extensive improvements within the College walls were also made. The roadways in front of the main building, and from the main building to the Technical School building, and on the west side of No. 4 building have been paved with imperishable vulcanite blocks, the curbs reset and all surface drainage put in complete order.

The rounding of the wall at Ridge avenue and South College avenue has been completed. The curbing, flagging and paving about it were delayed on account of the weather; they will be finished in the Spring.

#### MINOR TRUSTS.

Although the money value of all the Minor Trusts committed to our care, amounting to thirty-two, is small compared with that of the Girard Trust for the College, the relief which they afford to suffering and want is incalculable.

The Wills Hospital, the most important of these, and one of the most useful institutions of its kind in the United States, is cramped and paralyzed for want of proper support. We drew your attention and that of the community last year to the need of a new clinical room for the increasing business of the eye surgeons, estimated to cost about \$10,000, but our appeal for assistance has been only responded to, thus far, by a donation of \$500 in cash from a friend who carefully conceals his identity, \$25 from Mayer Sulzberger, Esq., \$10 each from Mrs. Sterrett and Miss Lizzie Ebert, and \$12 in smaller sums from four other charitable persons, in all \$557, going only a little way to accomplish this and other improvements which are urrently needed.

Although the noble bequest of Mr. Wills has increased much in value since his death, the income last year, \$13,785 91, scarcely enough for ordinary expenses, leaves no margin for necessary improvements to meet the actual wants of the patients now applying daily, and no hope of providing for the rapidly increasing numbers. In 1871 the whole number of patients treated at the Hospital was 2,500; in 1884 there were 7,012, many of whom were from other parts of the State, or from other States, or countries. More than half of the patients admitted to the house, and mainly supported from the income of the Trust, are from other parts of the State. Some years ago the Hospital received aid at irregular intervals from the State. This has long been discontinued, and is almost a tradition. Great mining and manufacturing companies, whose employees when injured, are taken care of within its walls, have in the past contributed liberally; but these donations have also ceased at a time than which they never have been more essential.

Perhaps the most serious cases treated are of patients from the country districts, such as wounds to the eye-ball, occasioned by the nature of the work engaged in; as mining, iron and steel manufacturing, and other like occupations. These, with other serious cases, receive the careful attention of the most skilled eye surgeons of our city, who render prompt and instant attention.

An application has, however, been made this year to the Board of Charities, and has been most favorably received. They have examined the Hospital, and will probably recommend an appropriation to the Legislature at this session.

Joseph Pettit, who had for many years rendered valuable and conscientious services as Steward at Wills Hospital, owing to ill health was compelled to resign, to our great regret. His place, and that of his wife as Matron, have been supplied by the election of Mr. Richard Wistar as Steward, and of his wife, Mrs. Charlotte Wistar, as Matron, who have, during their short term, given entire satisfaction. A few things essential to the comfort and health of the patients

were done during the year at the Hospital, such as painting and plastering, and a Hospital Tent to hold six beds, purchased to isolate as far as possible those patients having contagious diseases of the eye from the other patients.

The surgeons' report for 1884 is annexed, Appendix D.

The following coal orders have been issued:-

From Elias Boudinot	Fund,	266	ons of	coal.
Thomas D. Grover	**	1200 l	alf tor	is of coal.
Girard		225	44	"
Jacob Y. Snyder	**	211	**	44
Paul Beck		186	**	**
City	16	149		44
Shields	**	113		"
F. Augustus Sheaff	44	62		**

Total tons, 266; half tons, 2146; 2412 orders in all, as against 2149 last year.

During this year a part of the Grover property which had heretofore yielded a small return as compared with its actual value, was advantageously disposed of. The income from the proceeds of this sale will increase considerably the number of coal orders furnished next year.

The following persons have received medals and premiums from the John Scott \$4,000 trust:—

Thomas Hall, New York, improvements in type writing machines.

Joseph Benner, Philadelphia, improvements in sewer gas traps.

Horatio G. Eckstein, Philadelphia, improvements in feed water heaters.

G. Morgan Eldridge, Philadelphia, improvements in electromagnetic protectors for electric instruments. From the Hannah M. Dodd Trust there were awarded to the most distinguished graduates of the Girls' High School in Philadelphia:—

One gold medal to Heloise M. Burrough.

One silver medal to Susan M. Peddrick,

From the Benjamin Franklin Trust, four loans of \$300 each were made to young married artificers, and from the John Scott \$3,000 Trust two loans of \$300 each were made to two young married artificers.

The usual statement of the financial condition and the investments of each of the Minor Trusts is given in Appendix D.

To carry out the charitable design of Miss Mary Shieldsafter a conference with the Guardians of the Poor, it was arranged that a physician be appointed as Superintendent, whose duty it should be to visit the Almshouse daily or oftener, to confer with its officers, and to report to the Board in December of every year. Dr. W. H. Wallace was appointed. At the suggestion of the Board of Guardians, it was determined that a kitchen should be erected at the Almshouse for the comfort of the insane, which was at once begun. Dr. Wallace, in his yearly report, says the kitchen building is completed, but the cooking apparatus is not yet placed in position. He makes several valuable suggestions as to how the income for the coming year may be beneficially expended for the sick and insane poor at the Almshouse in Philadelphia. His recommendation in relation to the condition of the drainage in the insane department calls for, and will receive prompt attention. These drains, originally badly planned, are now defective and dangerous to the last degree, broken and leaking, with untrapped openings and imperfect In consequence of these defects the Doctor regards the condition of things as dangerous to health at all times, but especially in view of the very probable prospect of an epidemic of cholera with the coming warm weather.

In concluding this statement, thankful for guidance and protection in the past, we express the hope and trust often, but never too often expressed in previous reports, that He, who defends and provides for the fatherless children and widows, and all who are poor and desolate, will, for their benefit, continue to render prosperous the noble charities committed to our care.

By order of the Board.

W. HEYWARD DRAYTON,

President

December 31, 1884.

#### JAMES A. KIRKPATRICK, Superintendent Girard Estate.

Office of the Girard Estate, Philadelphia, Dec. 31, 1884.

# APPENDIX B.

# REPORT OF ENGINEER

OF GIRARD ESTATE,
IN SCHUYLKILL AND COLUMBIA COUNTIES.

IN SCHOTERILL AND COLUMBIA COUNTIES

# APPENDIX B.

To the Committee on the Property of the Girard Estate without the City of Philadelphia:

GENTLEMEN:-

THE business depression beginning to be apparent near the end of last year has continued throughout the year just closed. The great decline in values reached its lowest point in the middle of the year, and though there are still grounds for apprehension regarding the future, there are now signs of improvement. The depression which has prevailed, which may be called a trade depression, produced by the same cause, overproduction, which has operated to make coal mining unprofitable, has had little perceptible effect upon the growth of the Anthracite trade. The quantity of Anthracite coal produced in the State of Pennsylvania in the year past, while a million tons less than in the year immediately preceding, yet exceeds that of any other year in the history of the coal trade. The product from the Girard Estate for the year 1884 is one million, four hundred and six thousand, five hundred and sixteen tons, a hundred and ninety thousand tons less than for the year 1883. Packer No. 2 Colliery and William Penn Colliery increased their tonnage this year, while all the other collieries on the Estate fell short of last year's production.

The two original fifteen year coal leases, whose terms continued a year beyond the date of expiration of all the others, expire with this year. New leases to the same Lessees, the Lehigh Valley Coal Company, have been executed upon the same terms as the leases renewed last year to other Lessees.

The tables of annual coal production to date, and gross revenue from coal for the year ending November 30th, 1884, are given below, and following them a detailed statement of the progress of mining operations and condition of improvements at each colliery on the Estate, with a brief reference to other connected interest.

ANNUAL PRODUCTION OF THE SEVERAL COLLIENIES ON THE GIRARD ESTATE.

# DETAILED STATEMENT OF THE CONDITION OF MINING AND OTHER INTERESTS.

LEASE NO. 1.—HAMMOND AND CONNER COLLIERIES.—Philadelphia and Reading Coal and Iron Co., Lessee.—HAMMOND COLLIERV. The tunnel from the upper member of the Mammoth Vein on the slope level, commenced in December of last year, habeen driven to this date three hundred and thirteen feet. At one hundred and thirteen feet the Holmes Vein was cut, and proved a fine seam of coal thirteen feet and nine inches thick. The tunnel will be continued to the Primrose Vein. A thousand feet of gangway were driven in the Holmes Vein, five hundred and forty feet in the upper member of the Mammoth Vein, and eighteen hundred and eighty-five feet in the Buck Mountain Vein, all below water level. The coal shipped has come from the workings in these seams, and from the removal of pillars in the old gangways of the Mammoth Vein.

CONNER COLLIERY'S operations have been confined to the Buck Mountain Vein, and wholly to this date above water-level. The coal above water-level west of Raven's Run Ravine is approaching exhaustion. East of the Ravine only the lower gangway, which is within three hundred yards of the eastern lease limit, has been driven any considerable distance. Above this lower level faults and irregularities of the strata have heretofore prevented the working of the coal. Now that a gangway has been opened through these irregularities to the lease limit, it is to be hoped a successful effort will be made to mine the coal above this level. Nineteen hundred feet of gangway were driven, and a hundred and thirty-five thousand eight hundred and ninety-seven tons and seventeen hundred-weight of coal seat to market during the year.

LEASE NO. 2. - GIRARD COLLIERY. - Philadelphia and Reading Coal and Iron Co., Lessee .- The coal product of this year has come mainly from the eastern workings in the Mammoth Vein, on the north side of the basin, released by the removal of the Mahanov Creek from its outcrop last year. Some coal has come from the removal of pillars in the East Mammoth gangway, on the south side of the basin, and from new openings in the Holmes and Buck Mountain Veins. The two tunnels begun in December of last year were finished in August of the present year. That on the north side of the basin was opened through eighty-eight yards of rock before reaching the Buck Mountain Vein, that on the south cut the same seam, in seventy-six vards. The Buck Mountain Vein is a fine seam, varying in thickness from twelve to twenty feet, and is our most valuable coal seam after the Mammoth Vein. Its exact measurement where cut by these tunnels was nineteen feet and eight inches between top and bottom rocks, on the north, and sixteen feet and six inches on the south side of the basin. Gangways are being opened in this seam and in the Holmes Vein, lying immediately above the Mammoth, a seam of excellent coal six and a-half feet thick.

During the heavy rains of February the Mahanoy Creek broke through the out-crop holes into the mine, filling its gangways with water, submerging its steam-pump and compelling a suspension of work for two months. In August the slope in the Holmes Vein on the south side of the basin, which was used as a second outlet and passage-way for men and mining material, was destroyed by the breaking away of a mine car, which, in its descent, tore out the supporting timbers, and let down the superincumbent strata. The difficulties of reopening and securing it were so great as to induce its abandonment and the determination to open a new slope in the Buck Mountain Vein on the north side of the basin, at a point convenient for independent operations in the future in that seam above and below the present tunnel levels. The dip of the measures on this side of the basin is less steep than on the south side and the point selected for the slope, two hundred and fifty vards west of the tunnel, will land the product at a proper elevation and sufficiently near for convenient use of the breaker plant now erected. The prospect for the coming year is favorable for a largely increased tonnage.

LEASE NO. 2.—NORTH ASHLAND COLLIERY.—Philadelphia and Reading Coal and Iron Co., Lessee. - The Mammoth Vein workings already opened at the beginning of this year have yielded more than a hundred thousand tons of coal. The tunnel from the Mammoth to the Buck Mountain Vein, commenced in December of last year, was completed in September. The length of the tunnel proved to be three hundred and fifty-one feet. The Buck Mountain Vein where first out measured eighteen feet in thickness. and in the two hundred yards of gangway driven to this date continues a fine seam of coal. Among improvements contemplated by the Lessee are retimbering the slope and reducing its height to nine feet, substituting the large, fixed and self-dumping cars called gun-boats for the hoisting of mine cars on the slope, and the erection of a frame structure for a dump chute, in which the coal may be cleaned of slate and refuse before going to the breaker; all looking to an increase in production next year.

Lease No. 4.—Packer No. 2 (Shenandoah) and Packer No. 4 Collieries.—Lehigh Valley Coal Co., Lessee.—Packer No. 2 Collier is one, of two alone, making an increased yield this year over the preceding. Its coal has come mainly from the Mammoth Vein, though the Holmes Vein has contributed a considerable proportion of the whole, and the Top-split Vein, thrown off from the Mammoth, and the Buck Mountain Vein, have furnished some. Coal is mined in four different seams, and on five different levels, as follows:—

Above water-level in the Buck Mountain Vein.

On the first slope level, in the Mammoth Vein.

On the second slope level, in the Mammoth and the Holmes

On the third slope level, in the Mammoth Vein.

On the fourth slope level, in the Mammoth, the Top-split, the Holmes and the Primrose Veins.

The work of proving the Buck Mountain Vein above water-level was only commenced in the middle of the year. The formation of the north basin of Packer No. 3 Colliery, commencing about this point, may affect the condition of this seam in places above water-level. On the lower levels and further west the formation will be more regular and the seam doubtless in its usual good condition. The tunnel to the Holmes Vein, commenced in November. 1883, was completed in May of this year. The variation in thickness of the intermediate strata, as well as of the coal seams, is well illustrated here in the measures lying over the Mammoth Vein. On the second level the thickness of rock between these seams is two hundred and thirty-five feet, while on the fourth level, two hundred yards below, it is but one hundred and twenty-one feet. The Holmes Vein, here evidently made up of the two seams first above the Mammoth Vein, is a seam of pure bright coal varying in thickness from thirteen to fifteen feet. The intervention of a three feet bed of slate in the middle of the seam at the eastern face on the lower level seems to indicate the separation of the Four Feet Vein from the Holmes Vein at this point.

The tunnel completed to the Holmes Vein in November, 1883, was continued this year, to open the Primrose Vein. The flattening of the trough of the basin threw the Primrose Vein twenty-one feet above the top of the tunnel, where, at a distance of two hundred and interly-four feet south of the Holmes Vein, it was found in November by an experimental hole driven upward through the rock. The seam itself has not yet been opened to any considerable extent, nor has the best method of bringing the coal through the tunnel been determined upon. The shipment of this year, the largest made in five years past, may be increased during the next season, if the demands of the trade require it.

PACKER No. 4 COLLIERY continues to hold its place as the second largest producer among all the collieries on the Estate. Its workings are extensive, and are kept well ahead of the demand upon them. On the second level two hundred and fifty yards of new gangway were opened in the Holmes Vein. On the third

level a hundred and fifty yards of gangway were driven in each the Four Feet and Holmes Veins, beside eight hundred yards in the Buck Mountain Vein, and on the fourth level five hundred yards, and on the fifth one hundred and fifty, all in the Mammoth Vein. In the Buck Mountain Vein an air-way and a travelling way for miners were opened from a point immediately east of the tunnel on the third level to the highest point to which the seam rises before declining into the northern basin, a distance of nine hundred feet. At this point a shaft was sunk a hundred feet through rock to the coal seam, and a fifteen feet fan erected for the ventilation of these workings.

The rise of the axis of the basin compelled the stoppage of the Mammoth Vein workings on the fourth and fifth levels at different points and elevations, and of the Holmes Vein gangway on the third level nine hundred feet east of the slope.

The tonnage to market from the two collieries on this lease is three hundred and thirty-four thousand, eight hundred and sixty tons, a very little below the tonnage of the year preceding.

A renewal of the lease covering these two collieries has been executed to run fifteen years from January 1, 1885, at the same rate of royalty, and upon the same terms as the renewals of other leases made a year ago.

LEASE NO. 5.—CONTINENTAL COLLIERY.—Lehigh Valley Coal Co., Lettee.—While making extensive improvements for future use a small production was maintained almost equal for the whole year to that of the year previous. The inside slope to the third level in the Mammoth Vein has been completed. The tunnel on the second slope level from the Mammoth to the Buck Mountain, reached the latter seam in September, after cutting through four hundred and fifty-nine feet of hard sand rock. The fault affecting the Buck Mountain Vein on the water-level was found to extend also to this level. An attempt will be made to cut through the fault on the east side to reach the fine body of coal known to be there as well for the benefit of this level as that above. The tunnel on a rising grade to open the Primrose Vein in the trough

of the basin has cut the coal eleven feet thick a hundred yards from the Mammoth Vein. Gangways will at once be established, a plane erected and arrangements made for a large production of coal from this seam. Other improvements made during the year were the changing of the gauge of the railroads in gangways and on the slope, the erection of new hoisting engines, the addition of six boilers for generating steam, beside renewals and repairs to breaker machinery and colliery equipment generally.

LEASE No. 6 -PACKER NO 1 (COLORADO) AND No. 5 COL-LIERIES .- Lehigh Valley Coal Co., Lessee .- Packer No. 1 Colliery has continued to yield a moderate product while making preparations in connection with the new colliery opening for a large business in the future. The Primrose Vein won by a tunnel from the Mammoth Vein on the first slope level has been opened sixty yards east and ninety west of the tunnel. Containing a large proportion of refuse, and being divided into two parts most awkwardly by a heavy bed of slate, it was not counted profitable to work at the present time. The two tunnels from the Mammoth in progress a year ago reached the Buck Mountain Vein on the waterlevel and first slope level in January. The water-level tunnel, or rock slope from the face of the old water-level tunnel, cut the Buck Mountain Vein on the ridge of a small elevation in the measures, which declining to the west allowed the gangway started on the south dip to pass around a west dip to the regular north dip of the slope. In parts of the ground opened the Buck Mountain Vein has been very good, but altogether neither on the slope level nor on the water-level has it been thus far as fine a seam as that found at Packer Collieries Nos. 2 and 4.

The Seven Feet Vein, between the Skidmore and the Buck Mountain Veins, has been opened seventy yards east and west of the tunnel on the water level, and in places has been found to be a fine seam of coal. The wast gangway of the water-level in the Mammoth Vein has been re-opened, and timbered anew around the west end of Bear Ridge and into the fine coal which was left some ten years ago to be mined by East Bear Ridge Colliery, but

which it was subsequently found could not be opened from that colliery. A railroad for mine cars has been graded on the surface from Packer No. Tolliery to No. 5 Colliery, with a view to preparing all the coal from both collieries at the breaker of the latter when desired.

PACKER No. 5 COLLIERY is located twelve hundred and eightyseven yards west of No. 1 Colliery, and about in the centre of the enlarged limits given to the lease upon its renewal a year ago. The opening through which the coal will be hoisted is a shaft, rectangular in shape, at too fifty feet two inches north and south by eighteen feet east and west, outside of the cribbing; lower down in the rock, forty-five feet eight inches north and south by fifteen feet six inches east and west, outside of timbers; divided by timbering into six compartments, one on the north end for an air-way, eight feet by twelve feet ten inches, one on the south end for a pumpway, five feet by twelve feet ten inches, and four in the middle for hoisting coal, each six feet six inches by twelve feet ten inches. The sinking of the shaft was begun on the 15th of February, and since that date has been sunk three hundred and seventy five feet through slate and sandstone without meeting any seams of coal. Part of the drilling is done by hand and part with an Ingersoll Rock Drill driven by compressed air. The dip of the measures is north, varying from eighty to sixty seven degrees from the horizontal. The breaker in course of erection, and now under roof. stands on a branch of the Ashland Extension of the Lehigh Valley Railroad, with its tip a hundred and thirteen feet above the track. Its capacity will be two thousand tons daily.

The operation of the rock drills in the sinking of the shaft, and the location of the plant, were inspected by you and other members of the Board, upon your visit to the coal lands of the Estate, in October.

LEASE NO. 7.—WEST BEAR RIDGE COLLIERY.—Philadelphia and Reading Coal and Iron Co., Lessee.—The tunnels on the second level, from the Mammoth Vein, commenced in December

of last year, were completed to the Buck Mountain Vein in July; that on the north side of the basin being seventy four yards in length, and that on the south side sixty seven. Three hundred yards of gangway have been opened in the Holmes Vein, on the south side of the basin. The Mammoth Vein continues to yield a large amount of fine coal from breasts on the north side and from the removal of pillars on the south side of the basin. The coal from the Buck Mountain, the Holmes and the Mammoth Veins, should enable this colliery to make a largely increased tonnage. Looking to this, extensive improvements have been made on the surface. Twenty-four new boilers have taken the place of the twenty worn out and removed, gun-boats (large self dumping undetachable cars) have replaced mine cars on the slope, and provision is making for partly cleaning the coal in a dump-chute before sending to the breaker.

Lease No. 8.—East Bear Ridge Collery.—Philadelphia and Reading Coal and Iron Co., Lessee.—A large proportion of the coal mined has come from the open air workings on the top of Bear Ridge. The balance of the coal mined has come from new workings near the eastern lease limit and from the removal of pillars in the water-level workings. Thirty yards of gangway were opened in the nine feet coal seam, a split from, and lying immediately above the Mammoth Vein, in which the coal was found in three beds of two and three feet each, two of them of fairly good coal.

THE NORTH LAUREL RIDGE COLLERY Of John A. Dutter, shipped fifteen thousand three hundred and sixteen tons of coal from this lease, which in the tables above, is included in the shipment of East Bear Ridge Colliery. This coal is taken from the Buck Mountain Vein above water-level, along the southern line and near the east end of the lease.

LEASE No. 9.—WILLIAM PENN COLLIERY.—William Penn Coal Co., Lessee.—This colliery leads all on the Estate this year, as it

has for years past. Its shipment is two hundred and thirty three thousand one hundred and fifty seven tons, exceeding its greatest previous shipment of the preceding year by over five thousand tons. The Mammoth Vein has furnished the greater portion of this, but a large product has come also from the Primose, Holmes and Buck Mountain Veins. The length of new gangway driven during the year, was two miles, on different levels and in different seams, as follows:—

## Above water-level-

```
In the Mammoth Vein.
                             510 vds. of gangway.
         Holmes Vein.

```

The extension of gangways into fresh coal, it will be noted from this, is kept well ahead of immediate necessities in order to provide against accidents in any part of the mine which may interfere with the steady flow of coal required to maintain so large a production. Beside some renewal of boilers and ordinary repairs to outside and underground plant, the timbering of the hoisting shaft has been rebuilt from the landing down to solid rock.

LEASE NO. 10 .- KEHLEY'S RUN COLLIERY .- Thomas Coal Co., Lessee .- This colliery is fortunate in having not only the Mammoth Vein, but also the seams below it, the Skidmore, the Seven Feet and the Buck Mountain exceptionally fine and large. The product of this year has been drawn from all of these, and the whole still from the first slope-level. Three tunnels on this level at different points now connect the Skidmore and Seven Feet Veins with the Mammoth, one of them extending to the Buck Mountain Vein. In these three seams under the Mammoth, twelve hundred yards of new gangway have been opened. The condition of gangways, air-ways, pumping machinery and equipment underground was never better than at the present time. The improvements on the surface as well are in good order. An extensive new plane for the elevation and convenient deposit of the refuse from the breaker has been built, which will diminish the cost of its handling and afford a place of deposit for many years.

I.EASE NO. 11.—PACKER COLLIERY NO. 3 (formerly LEBICH COLLIERY).—Lehigh Valley Coal Co., Lesse.—This lease, expiring on the thirty-first day of December, 1884, has been renewed for a period of fifteen years from the first day of January, 1885, upon the same terms and at the same rate of royalty as all other coal leases on the Estate.

Coal has been mined during the year on all of the seven levels in the Mammoth Vein, that mined on the two upper levels coming from the removal of pillars. Though the coal in the Mammoth Vein on the five lower levels is sufficient to maintain the present rate of production for some years, it was deemed wise to make provision in abundant time for its exhaustion and for an increase of the colliery's product if required, by the opening of the seams of coal underlying the Mammoth Vein, the Skidmore, the Seven Feet and the Buck Mountain Veins which were known to be exceptionally fine on this part of the Estate.

Tunnels on the second and fourth levels commenced in January of this year and finished in July, cut these seams in succession, thirty-six, fifty-five, and a hundred and four yards under the Mam-

moth Vein. The Seven Feet Vein and the Buck Mountain Vein proved especially fine, each being ten feet in thickness. In these two seams seven hundred yards of gangway have been opened in the last six months. In addition to this, five hundred yards of gangway were driven this year in the Mammoth Vein on the sixth and seventh levels. This part of the mine workings and the fine coal in it was inspected by yourselves and others of the Directors upon the occasion of your visit to the coal lands of the Estate in October of this year.

From this colliery the fine block of coal weighing three thousand two hundred and fifty five pounds was selected for exhibition at the New Orleans Exposition now open, contributed by the Directors of City Trusts as a part of the municipal exhibit of the City of Philadelphia. Beside the improvements above, two large steam pumps have been provided and will shortly be set in place on the seventh and second levels for use in emergencies, and six steam boilers have been added to those already in use

Lease No. 12.—South Laurel Ridge Colliery.—John A. Dutter, Lessee, covers the coal of the Mahanoy basin on the Thomas Paschall and John Blackey tracts, south of the Flower and Mettz interfering warrants. In connection with this small body of coal Mr Dutter leases the coal on the land adjoining from Messrs. Gilbert and Sheafer. The new slope sunk and breaker erected during the year and all mining operations to this date are on the lands adjoining. Within a short time the gangways will be extended into the coal of the Estate.

THE LEASE OF THE SURFACE NORTH OF GIRARDVILLE BOROUGH FOR REFUSE COAL DEPOSIT AND THE GIRARD JIC HOUSE PRIVI-LEGES have yielded a rental of seven hundred and twenty eight dollars and fifty-four cents.

FOR THE TIMBER CUT FROM THE THOMAS BARNES, JR., AND CHARLES COCHRAN TRACTS, eight hundred and two dollars and fifty cents were received.

SMALL LOT LEASES AND SALES OF STONE AND SAND brought a revenue of five thousand three hundred and seventy one dollars and sixty cents.

FROM BUILDING LOTS SOLD IN GIRARDVILLE, the receipts were eleven thousand one hundred and ninety seven dollars and eighteen cents.

FOREST TREE CULTURE.-The culture of a second growth of forest timber on the Estate, which has received attention from time to time since 1877 in the clearing of underbrush and thinning of crowded sprouts of oak, chestnut and pine springing up spontaneously, and in the setting out of several thousand shoots of Austrian and Scotch pine and Scotch larch, is deserving of continued trial. The mountain lands of the coal region once covered with fine forests are now bare of timber, and for that product valuable not only for mining, but for almost every industrial purpose we are dependent on the rapidly exhausting supplies from more distant parts of our country. The question of timber supply will ere long be a serious one not only for the mining region but for the whole country. The report of the Department of Agriculture for 1882 states, that the value of the forest products of the United States for the census year (estimated at \$700,000,000) exceeded the value of wheat, rye, barley, buckwheat, and potatoes for the same year, and that the annual product of our forests is nearly ten times in value that of our mines of silver and gold. This simply means that the immense forests found throughout the length and breadth of our land are being swept away with great rapidity, and that in a very few years, unless immediate steps are taken for their renewal, the timber supply will be exhausted.

The pine and oak shoots set out on the Alexander tract north of Girardville in 1878 have escaped the forest fires and grown to a diameter of three quarters of an inch. The young oak and chestnut trees, from about which on a couple of acres in the same vicinity the undergrowth was cleared away, have grown more rapidly than other sprouts in the neighborhood which received no attention.

The shoots of larch, then but three inches in length, set out on the Girard Estate in the Spring of 1881, now grown to a height of four and five feet, seem to be well adapted for cultivation in our soil and climate. This timber has been found elsewhere well suited for mining purposes, and seems on that account, as well as on account of the facility with which it takes root and the rapidity of its growth, to be specially desirable for use in a somewhat larger experiment. The rising ground north and east of the new reservoir No. 3, now building by the Girard Water Company, and the ground forming the water shed of Lost Creek stream above and below the main reservoirs, are proper localities for the trial of further experiments, because of their being more immediately under the observation of the officers of the Estate and because there is need of timber there to prevent the rapid evaporating of the moisture of the ground about the streams and springs furnishing the water supply, and to retain the snows of winter unmelted late into the season.

The rates of tax for the maintenance of schools, roads, poorhouses and county government in the different townships and boroughs in which the Estate has property are given in the following table:—

Township or Borough,	Read or Borough,		hool.	County.	Poor.	1684. Total.	1883. Total
					$\overline{}$		
Conyngham .	5½ mills.		mills.	ş millə	15 mills.	54 mills.	54 mills

Khae	10 "		- 17	6 "			40 100000000000000000000000000000000000

The taxpayers associations in Butler and West Mahanoy townships have continued to keep in repair the township roads and to make the new roads required at their own expense, without a tax levy. In Conyngham township the road tax of the Estate was paid in labor on the township roads. I take pleasure in commending to you the industry and fidelity of the officers associated with me in the care of the Estate in Schuylkill and Columbia counties.

Very respectfully yours,

HEBER S. THOMPSON,

Engineer of the Girard Estate.

POTTSVILLE, PA., December 31, 1884.

## To the Directors of the Girard Water Company.

## GENTLEMEN:

THE Girard Water Company commenced business on the first day of January, 1884, taking possession on that day of the reservoirs, No. 1 and No. 2 on Lost Creek, a piece of ground sufficient for the site of another reservoir, of Lost Creek stream between the reservoirs and its head-waters and a strip of ground extending ten yards on each side of the stream, all previously the property of the City of Philadelphia, Trustee. The supply of water to all consumers was continued by the Company the same as though the ownership of the water works had not been changed.

THE No. 2 RESERVOIR was full of water on the first of January, with sufficient water flowing over the waste-way and in the stream below it to supply the demands of consumers. This condition continued until the middle of April when the gates were opened and the water drawn down from a height of twenty-three to sixteen feet to permit the excavation of the ground, at the upper end of the No. 2 reservoir, for a new reservoir, No. 3. The inflow of the stream continued to supply sufficient water for consumers until the first of June, when a small quantity was required to be added daily from the water stored. The stream, supplemented by water stored, continued sufficient until the tenth day of September, when a supply was furnished for a part only of each day until the end of October. From that date until the twentythird day of October the water flowing in the stream was sufficient to supply the consumption and raise the water in the dam to a height of twelve feet. On Sunday, the twenty-third day of November, an unusually heavy rain fall occurred, which so raised the stream that it flowed five million gallons daily for five days, filling the No. 2 Reservoir to overflowing on November twenty-ninth. At this date it continues full with a large quantity in excess of present needs running to waste.

The total consumption of water during the year was 92,848,023 gallons.

The largest consumption in any one month (August) was 11,100,400 gallons.

The smallest consumption during one month (March) was 4.572,567 gallons.

A four-inch branch pipe was laid from the main in Shenandoah Valley to Packer No. 5 Colliery, a distance of nine hundred feet.

An eight-inch pipe was laid nineteen hundred feet in length from No. 2 reservoir on a slight grade, south along the brow of the mountain, east of Lost Creek ravine, to a point directly above No. 1 (the distributing) reservoir. to which a six-inch branch pipe was laid. The eight-inch pipe may, when desired, be continued eastward to supply Packer No. 3 Colliery, whose water supply from springs above and below the Buck Mountain Vein, though at present quite ample, will be destroyed by mining operations now begun in that seam.

The branches supplying William Penn and Packer No. 4 Collieries are laid on ground which, sooner or later, will be disturbed by the withdrawal of the coal under the surface, when a branch from the eight-inch pipe above may be substituted. The six-inch pipe connecting the No. 2 and the Distributing reservoirs will, to a great extent, obviate the washing of clay and sand into the pipe mains and consequent annoyance to consumers and damage to water meters.

No. 3 RESERVOIR.— On the twenty-sixth day of February a number of experienced and reliable contractors were invited to bid upon the work of building a new and larger reservoir on Lost Creek above those already built.

Seven bids were received for this work, the lowest of which was that of Mr. Thomas H. Rickert of Potsville. A contract was accordingly executed with him for the building of the reservoir and the removal of trees, undergrowth and mould or loam from the surface to be covered with water.

The contractor commenced work on the seventh day of April with a force of thirty men, increased to seventy on the eighth, and

to a hundred and thirty on the fourteenth, with about which number he continued the work until forced to suspend operations by the severity of the weather on the eleventh day of December.

The site on which the reservoir was necessarily located, proved in its geological structure to be about as unfavorable as could be imagined, having its line of embankment transverse to the synchinal axis of a small basin with the axis rising toward the interior of the reservoir. On one side of this basin the stream had broken through and cut away the rock, exposing the edges of the broken strata both inside and out of the reservoir with the inclination of course from the inside outward.

The ground plan of the embankment is shown on sketch No. 1, attached hereto, while on sketch No. 2 are shown the original surface line, the geological structure as developed by the excavations for puddle wall and the depth to which the excavation was carried. The sheet of transverse sections through the embankment shows also the depth to which the puddle ditch was carried below the surface as well as the method of carrying the discharge pipe through the embankment and the plan of the waste-way. Assuming the general plan of an earth embankment for holding a large body of water to be correct as to width and elevation of top above high water, slopes of inside and outside surfaces, location and proportions of puddle wall and that good material for making the bank is abundant, the most serious difficulties to be encountered in its construction on such a location as that here obtained are, first, to prevent the escape of water through porous soil or crevices in the rock under the embankment, and second, to guard against a leak along or under the discharge pipe through the embankment.

To prevent the escape of water under the embankment the excavation was carried to whatever depth was required to secure a foundation impervious to water. At the extreme northern end of the embankment this was secured, at a depth of a few feet, in a hard, close, conglomerate rock. Two hundred feet further south a coal seam was found four feet in thickness with slates above and below it dipping south at an angle of fifteen degrees. These were cut out to a depth of thirty feet. South of this the coal and

slates were close and hard, and overlaid by a bed of sand-stone which, near the surface, was much broken and full of crevices, but at a denth of sixteen feet was compact and apparently sufficiently tight to hold water under any pressure. The measures here had a very slight dip south and west. South of this, at a point four hundred feet north of the extreme southern end of the embankment. the inclination of the rocks was slightly to the north, and between this point and the southern end of the embankment, the whole of the north dipping strata had been cut out by the waters of Lost Creek to a depth of twenty-five feet lower than the ridge to the north. In the excavation for a puddle ditch and a foundation impervious to water in this gap, the rock at the northern end of the ravine was found broken and with open crevices for a distance of thirty-seven feet below the surface. At this depth the coal seam which had previously been found at the north end dipping south was found inclining slightly northward. The coal seam was cut out here, and further south to its outcrop, and the excavation continued across the ravine at about this level to and into the hard, conglomerate rock coming up at the south end of the embankment. Upon this foundation, and against the rocks forming the sides of this ditch, a soft puddle of clay and sand was worked with forks and sharp pointed rods until the ditch was wholly filled to the surface.

Owing to the inclination of the basin from the inside of the reservoir toward the puddle ditch and the fissured condition of the sides of the ditch a large body of water flowed from this direction into the ditch which it was thought prudent to cut off by a second ditch under the inside edge of the embankment. This second ditch was excavated down to and through the coal seam, as shown on section at C on map No. 3. A steam pump was put into it which, by the aid of a small pump in the main puddle ditch, kept both clear of water until after the main ditch was puddled to the original surface.

The second difficulty in construction above referred to was to guard against leakage along the discharge pipe through the bank. The same objections which lie against a pipe through the bank lie as well against an open stone culvert, and can be overcome in either case only by the greatest vigilance to secure carefulness of work. The first objection to the pipe is its liability to fracture under unequal pressure in the settling of the bank. This was met by building a stone wall for its support under the whole width of embankment laid upon a foundation of rock in place. The second objection is the danger of water creeping along the pipe, or finding an escape through the stone wall carrying it. This difficulty was met by surrounding the pipe with an eight-inch jacket of concrete with projecting flanges at intervals, against which a puddle was worked binding the pipe and embankment compactly together. The principal danger of leakage in carrying a pipe through an embankment is in the imperfect masonry which will surely be imposed upon the work if not prevented by the most active and uneasing vigilance.

To secure a wall impervious to water where the continuity of the puddle was broken, the stone wall carrying the pipe across the puddle was built with its outside course four feet thick with cut beds and joints laid carefully in cement, thirty-eight feet in depth under the pipe, and with the balance of the wall in the puddle ditch to the same depth of rubble masonry made solid with the best cement grouting run in over every course.

The discharge pipe through the embankment, which is sixteen inches in diameter, was carefully laid and before covering was tested under pressure, and all leaks developed in iron pipes, lead joints and water gates were securely closed. After the cement covering was applied to the pipe and allowed to harden, it was cut off in places around the whole circumference of the pipe to test the closeness with which it adhered, and subsequently replaced.

The waste-way was built on the ridge three hundred feet from the north end of the embankment, with its curb line placed to meet the water line on the slope of the bank when raised eight feet higher, as contemplated at some time in the future. The puddle wall was made continuous by carrying it up to and around the waste-way walls toward the interior of the reservoir.

No material for the embankment was allowed to be taken from the surface to be covered with water. The material of the embankment was clay and sand put on in one foot layers, sprinkled with water and well packed by the driving of carts over it. When the severe cold compelled a suspension of work the bank lacked eleven feet of its required height. A small force of men worked until the 24th of December, cutting a temporary waste-way for the security of the bank in case of the inability of the discharge pipe to take all the water at any time during the winter. The embankment, when completed to the height now proposed, will have sufficient width to admit of its being raised eight feet higher whenever desired. The water line of this increased height is shown by a broken line on sketch No. 1.

Dioken inic on sketch ivo. 1.	
The area of the water surface is bankment foot now building	
The additional area for an inci	reased height of
eight feet will be	14.5 "
Making together .	
The capacity of the reservoir a	as now
building will be	85,177,000 gallons
The capacity of the increased I	height
of eight feet will be	64,264,400 "
Together	. 149,441,400 gallons
The reservoir, to the height no ecks to finish, and will be compl	ow proposed, will require eight leted by the middle of June of

weeks to finish, and will be completed by the middle of June of next year.

Very respectfully yours,

HEBER S. THOMPSON,

General Manager.

CLINIC HOURS.—From a to 3 P. M. daily, (Sundays excepted,) at which time the Surgeons are in attendance for the examination and treatment of the patients presenting themselves.

The Clinics are opened to all regular Practitioners and Students of Medicine who desire to atualy the discusses of the eye.

## WILLS HOSPITAL.

## SURGEONS' REPORT FOR 1884.

THE Surgeons of the Wills Hospital respectfully present to the Board of Directors of the City Trusts, the following detailed report of the work done in that Institution during the year 1884.

During that period 7,012 persons applied for relief at the Hospital, being an increase of 807 over last year. Of these 231 were not considered proper recipients of the benefits of the charity.

526 patients were admitted to the wards during the year.

118 cataract, and 58 iridectomy operations were done during the year. On the semi-centennial anniversary of its existence, the Surgeons can safely congratulate the Board of Directors upon the general efficiency of the Hospital. From its opening, the 3d of March, 1834, to the present time, 99,734 patients have received the benefits of the Institution.

During the past twelve years 11,548 operations have been performed.

The number of patients treated in the wards of the Hospital in 1814 was 24; in 1884, there were 526.

In 1839, the out-patient practice was first established and numbered 10 patients; in 1884, there were 7,012.

The Hospital is now worked to its fullest capacity. With any material increase in its applicants, there will be required a corresponding increase of its facilities. This applies more particularly to the clinical practice, or to those who are not treated in the Hospital wards. This out-practice has entirely outgrown the means provided for its care. The crowd is such that a proper classification cannot be made, and adds to the difficulty of the careful and exact visual examinations daily required.

That a few years ago the Hospital received aid at irregular intervals from the state is true. It is now a tradition. Help was also derived from some of the great mining and manufacturing companies, whose employees when injured were taken care of within its walls. But of late, such substantial aid has ceased, when most needed, and when the most could have been made of it.

The fact that more than half the patients admitted to the bouse, come from the State, rather than from the City, as shown by a reference to the statistics, forms the basis of a plea for a larger consideration on the part of the people of this Commonwealth.
